

Community Hangout Today!

Join Joe Brinkman, Will Strohl, and guests Francesco Rivola and Brian Dukes for the next Community Hangout, [Discussing DNN 7.4](#), today, February 4, 2015 at noon PST.

Build World-Class Digital Experiences with Evoq 8

Watch the [webinar replay](#) to learn about the latest release of Evoq with web content personalization for better targeting, a streamlined user interface, integration with Box, Dropbox, and Marketo, and more!

Message from Joe Brinkman

Since DNN was first released over 12 years ago, it has been supported, promoted and enhanced by our community of users, developers and designers. Like any Open Source project, DNN succeeds because of the numerous community members who work behind the scenes on the project. Whether it is releasing another module or theme in the [DNN Store](#), implementing another customer website using DNN, supporting users in the [forums](#) or working on [core platform code](#), we all have a hand in making DNN great.

Over the last 6 months I have seen firsthand the strength of our community at work. During this time we have released 2 maintenance releases, and today I am pleased to announce the release of DNN 7.4.0. During this time I have seen more and more community members step up to help improve the platform by contributing code. They have fixed big bugs and little bugs. They have added minor enhancements and worked on major new features.

I have witnessed a community that is hungry to help in whatever way possible. I have witnessed community members working late nights and weekends to get the last bit of code submitted before a big deadline. I have even seen a [company in our community](#) shut down for an entire day so their 19 employees could focus all of their effort on a needed enhancement for the platform.

I am very pleased with how far we have come as a community in the last 6 months. I am seeing signs of growth throughout the community and look forward to seeing what the next 6 months hold. We have some very ambitious plans for 2015, and I am confident that

our community will rise to the challenge once again.

[DNN Scheduler not running in specified time interval](#)

I have a DNN Scheduler in my application which needs to run on **every 2 minutes**. I noticed that my Scheduler is not running specified time interval (i.e. about 15 mts) in every one hour.

[Standard Registration - Region does not act as child for country in drop downs](#)

We use the standard registration with mostly default settings. On the registration form, when a user selects a country from the drop down, the region drop down does not update. It just has all the regions that are in the database displayed for every country. Does anyone know how to correct this?

[Using JavaScript Libraries in DNN](#)

In December 2013, version 7.2 of the DNN Platform was released, which included a new type of extension, the JavaScript Library. At Engage, we've found this to be very useful to us in many scenarios, and we've been investing in creating a solid body of libraries, but I don't think that many other developers or theme designers are aware of it and how they can make use of it.

[Using SQL Profiler with DNN](#)

SQL Profiler is a great tool to find out the SQLs being executed by your application. It comes very handy in troubleshooting customer issues.

[DNN Development Templates updated, now with Themes!](#)

For years I have maintained a set of Visual

An Admin can update the profile picture for any user and the users can not update their profile picture themselves. I know I should allow the visibility for "all users" and Read only should be off.

But how many times I did try. I marked the read only and Required to off. But it is not saving. When I am updating and open again, I can see the same.

Top Questions from Community Exchange

[Preserve original time stamp of uploaded file](#)

We have bulk historical PDK files in our old system (Asp.Net Web form) and all files are located in windows UNC location. Recently we migrated this old site into DNN(Version 7.1) and we are using "Azure Folder Provider" to store uploaded files into Azure Blob storage. We uploaded above historical PDF files into newly created DNN site from file management screen. Problem we identified are:- 1.We can't preserve original time stamp of uploaded files. After uploading files are considering uploaded time as original time stamp. 2.As a result, file search module with date parameter is providing wrong result set.

[What open source modules support the DNN Social API?](#)

I would like to use the groups functionality for an Intranet for a client but it seems there aren't very many modules that actually support groups integration (journal integration and filtering by GroupID). So far I know Q&A and ActiveForums do. But I need documents, articles, and more.

[@David O'Leary](#)

Studio project templates that are used by thousands of people to quickly and easily create Modules for the DotNetNuke Content Management System, and for years, I have had people request that I create a project template for creating a DNN Skin (Theme).

This weekend I finally took the time to do just that. With the latest release of my Visual Studio project templates, you can now create a Theme for DNN. When doing so, you will be presented with a basic skin, using Bootstrap v3.1.1, based on my HammerFlex theme for DotNetNuke.

New Ideas from Community Voice

[Social modules -> SPA \(Gmail-like theme\)](#)

Using a simple theme to group the social modules. Now the social modules are like those of the late 90s. On Github you will find a large number of clean, nice-looking themes that DNN can use easily.

[@Kurt Wilby](#)

[Mass Delete Users](#)

It would be nice to be able to nuke a bunch of users out of the system either with checkboxes or by some filter criteria.
