

# Transport Health Insurance

[transporthealth.com.au](http://transporthealth.com.au) | [View case study](#)

The Digital Embassy was commissioned to build a next generation website for Transport Health Insurance, utilizing its integration with the Hospital and Member Benefit Administration System (HAMBS) coupled with a new release of Member Facing Web Services (MFS).

Having extensive knowledge and experience working with health funds to create unique, award-winning claiming applications, The Digital Embassy embarked on a scoping workshop to define the full set of deliverables required to complete this project and deliver the best digital solution.

HAMBS, the administration systems partner to Transport Health Care, needed to reflect the advancements made to its newly developed Member Facing Services, including the ability to pull functionality directly from the HAMBS system to the quoting functionality of the new website.
