

DNN Industry Recognition

In the northern hemisphere, autumn generally signals a gradual change in color from the lush green of summer to a landscape of vibrant red, orange, and yellow. In the software industry it also signals the publication of a variety of analyst reports and awards to help customers make educated choices as they close out their year end budgets. 2013 was no different in this regard, and DNN was fortunate enough to receive multiple accolades from a variety of respected sources including [Gartner](#), [CMS Critic](#), and

Message from the Founder

Last month I had the pleasure of attending DNNCON in West Palm Beach Florida, a user conference graciously hosted by Arrow Consulting bringing developers, web designers, administrators, and end users together to learn and talk about DNN. It was an amazing event with some very high quality speakers, professional sponsors, and enthusiastic attendees. Perhaps the most impactful aspect of the conference from my perspective was the very high percentage of attendees who had never attended a DNN conference of any type in the past.

[Info-Tech](#). In particular, the Info-Tech recognition was exceptional, as it identified DNN as a Champion amongst its content management peers and rated it as being the Top Overall Value in the market. [Read More](#) here.

DNN Platform 7.1.2

DNN Platform 7.1.2 was released on September 24th and represents the latest iteration of our award winning open source platform. The 7.1.2 release focused on 3 major initiatives:

- 1) Significantly reduce the outstanding issues and enhancement requests in our backlog
- 2) Identify and resolve as many issues as possible where the community has provided a partial or complete code fix

I had the honor of delivering the keynote and I focused the theme of my presentation on one of the foundational pillars of our ecosystem, our open source platform and community. In recent months, we have been getting back to our roots and investing significant effort to engage with the community on a much deeper level than we have in the past. We have made dramatic changes internally on how we are building the platform, embracing modern tools such as [JIRA and GIT](#) which offer superior ways for us to interact and collaborate with our developer community. We are using continuous integration and delivering [nightly builds](#) to users can experience the changes we are making to the platform in real-time and providing the opportunity for much tighter feedback loops. We are utilizing the community tools offered by [Evoq Social](#) to gather valuable insights through [Community Voice](#) which help influence the product road-map. And these changes are beginning to reap rewards. Our most recent platform releases feature significant contributions from our community and I only expect this trend to continue.

It truly is an exciting time to be part of the DNN community.

Shaun Walker
Co-Founder & CTO

[Add Modules List tied to Vertical Scroll Wheel Event](#)

I really like the new control panel and how it operates. The only complaint I have is that when you go to add a new module to a page you are presented with a horizontal list that in order to scroll you have to drag the scroll bar left and right.
