

DNN 7.2 Release

For the past 3 years we have consistently delivered two major platform releases per year. So we are happy to announce that after many months of preparation we will be officially releasing DNN 7.2 on Wednesday, December 4th.

Many of you have already taken advantage of our open source policies to download and experience DNN 7.2 in its pre-release form. But for those of you who have not stayed abreast of our progress on this release, we are certain you will be excited by the

Message from the Founder

Last week the United States celebrated one of its more social holidays, Thanksgiving. On Thanksgiving it is traditional for people to get together with their friends and family for elaborate meals, drinks, and conversation. It is also customary for people to publicly give thanks and acknowledge the positive influences in their lives. So in the spirit of Thanksgiving I think it is appropriate to mention some of the things for which I am personally thankful.

certain you will be excited by the significant improvements we have made:

- Responsive default skin using Bootstrap
- Overhauled SQL Manager to provide improved database maintenance and development capabilities
- Integrated Module Creator to simplify and streamline module development - JavaScript Library management with dependency, versioning, and fallback support
- Subscription and Digest notifications for enhanced messaging capabilities

In addition to the above enhancements we have also resolved a substantial number of issues, making this release one of the most impactful yet.

I am thankful for the support of the many stakeholders in the DNN community. Whether you are a software developer, web designer, IT administrator, web agency, hosting provider, sponsor, partner, publisher, conference organizer, DNN MVP, customer, or end user, you have all played a significant and vital role in the evolution of DNN over the past 10 years.

I am thankful for our investors who provided the necessary capital and market confidence to grow a vibrant, stable business that is able to generate revenue while at the same time serve the needs of our open source community.

I am thankful for my co-founders and colleagues who have dedicated their lives past, present, and future to DNN and have persevered through challenging times to ensure the success and longevity of our ecosystem.

In closing, I am constantly humbled by the gratitude and appreciation shown by so many members of our community. I am very proud of what we have been able to accomplish collectively and the positive impact we continue to make on the world.

Top Ideas from Community Voice

[Add an option to propagate/replace permissions on child folders on File Manager](#)

DNN File Manager makes new folders inherit permission settings from their parent folder, but I couldn't find a way to propagate permission changes that are made on the parent folder to child folders.

[@sfilip](#)

[DotNetNuke.RadEditorProvider using 2013 Telerik components](#)

I am using the standard editor provider for DNN 6.1.5 and I recently upgraded the Telerik DLL to correct several browser issues. I upgraded to version 2013.3.1015.35. There seems to be an issue between the DNN provider and the newer versions of the Telerik component with uploading files larger than 2gigs. Can I just not use the newer version of the control in DNN? The issue seems to have appeared beginning with version 2013.2.522 of the Telerik controls

[LPL Localization](#)

[One page site option](#)

It would be nice if in DNN we could more easily build one-page sites. At the moment if we want to do this we have to make one skin, add a bunch of panes and then create a special navigation for this so we can link to each section.

[@nokiko](#)

[Configurable FullName](#)

I love the idea of the FullName token but I feel that it isn't being used to it's full potential (and even being deprecated!).

Currently the FullName token is set to display the users first and last name. But why can't we configure this ourselves?
