The Need

ACGME (Accreditation Council for Graduate Medical Education) needed a website redesign, a new Content Management System (CMS), and an entirely new way to manage and distribute standards documentation and relate this content to associated medical education program areas.

The Solution

BlueBolt implemented a powerful CMS that provided granular admin control of its content areas, and provided the ability to manage a number of content types, including standards documents, staff members, events, and general content areas.

The Technology

The website was built on DNN's EVOQ Content platform which enables the simple management of many different content types via a slick and intuitive interface.
