

# Log in securely with DigiD on Mijn Pensioenfonds

Dutch pension funds are required to comply with the requirements of Pension 1-2-3 legislation. An platform in which the pension participant can view the pension data in real-time is required. Via My Pension, pension participants of HaskoningDHV can arrange their personal data safely in one place and peek into their correspondence.

## Log in securely via DigiD

For security reasons, the pension fund opted for a DigiD connection. With DigiD anyone who has a civil service number, can get access to hundreds of Dutch government websites with a username and password without being connected to an e-mail address. This way, former employees can continue to consult their pension data in a secure way.

**“In terms of implementation, you belong to the top 3 organizations that we have audited”.**

RE-EDP Auditor

## Audits and DigiD

The security standard of DigiD is high. In collaboration with Logius we obtained access to the acceptance and production environments of DigiD. Upon delivery of My Pension with the login via DigiD, the entire application and the internal business process of ICATT was analysed and assessed by an external certified RE-EDP auditor. We passed the ICT security assessment, the Privacy Impact Assessment (PIA), Penetration test, Vulnerability assessment, Blackbox scan, Greybox scan and the overall DigiD audit with flying colours..

## Maintenance and Support

Managing a site that processes a lot of personal data requires professional monitoring, support and maintenance. We manage the site for Pensioenfondsen HaskoningDHV according to the ICT security standards and apply the ISO27001 / 2 standards. And we undergo different audits every year in order to continue to comply with the DigiD standard.
