

Looking for an easy and safe CMS

The National Mortgage Guarantee insurance (NHG)

The National Mortgage Guarantee insurance (NHG) site was outdated in terms of security and content management. Because of the large amount of content and quarterly updates of the 'Conditions & Standards', which contains a huge amount of legally terms and conditions, an easily manageable CMS was required. NHG chose ICATT as DNN supplier to re-build the site, to migrate the content and to host and monitor the website.

First the content migration, then further development

ICATT re-built the existing site and also improved the structure of 'Conditions & Standards', making it more maintainable with and gave it a more logical layout. After the release of the new

site was online, follow-up steps were taken. One of the first optimizations was a restyle of the site, where all content could be retained.

Easy and flexible CMS

The next step was the development of specific landing and theme pages which they could manage themselves. The modular design of DNN makes it easy for the editors to arrange the pages in different ways. At NHG several people work on the website and the learning curve is always limited, but because of the easy interface everyone can quickly join.
