Model Railroad Collector Wiki

Willkommen bei ModelRailroadCollector.wiki - eine kostenlose Online-Modelleisenbahn-Wiki-Datenbank, Sammlung-Management-Tool und Marktplatz.

Wir haben unsere Beta-Version am 22. Dezember 2017 offiziell veröffentlicht. Registrieren Sie sich und erstellen Sie Ihre eigene Sammlung!

About the Client

modelRailroadCollector.wiki is a free community powered online model railroad collection management system for Marklin & other model railway manufacturers. Easily create a categorized list w/images of collectibles and export data at any time to save offline. Contribute to the Wiki project by adding new items to the public database.

The Need

A way for users to manage their own media galleries, isolated from other users and integrated into a custom module utilized by the portal users to manage information about their items.

The gallery should be able to manage multiple language (EN, DE).

The Solution

DNNGlobalGallery provides all the features required by the solution, being its “Dynamic Root Folder” feature a key point to keep users isolated. DNNGlobalGallery is integrated in a custom module in an iFrame, receiving the required parameters in the query string. At runtime, the gallery template is set based on the user’s language.

Kurt Amstutz (owner of modelRailroadCollector.wiki) says:

Evotiva’s Global Gallery module is working very nicely - The website already has over 1000 file image uploads from my users. Very impressed with how the module works and it does exactly what I need it to do. I have an image gallery that opens/closes on demand and leverages GlobalGallery.

DNNGlobalGallery | Fast and flexible media gallery

DNNGlobalGallery is an easy to use and flexible media gallery, optimized for local or external media files, featuring many unique and powerful features.

It is the best way to create galleries of media you already have either locally (in your web server) or hosted in your favorite cloud storage provider.

DNNGlobalGallery allows you to present fully localizable template-based filtered views of the portal's media files served by any folder provider (file system), including all the providers supported by DNNGlobalStorage.

Please [let us know](#) which customizations or enhancements you need for your particular needs.
