DNN WEBSITE SKINNING, AND BESPOKE  
MODULE DEVELOPMENT

## Project Requirements

Mission Without Borders approached us needing a DNN-based website. They had a design from a graphic design agency in PSD format and required a UK-based company to convert this into a DNN theme, a process called skinning. Additionally, they needed the development of the DNN website, including page creation and content integration. As a charity, they also required the website to accept donations in various currencies, using different payment gateways based on the donor's location, necessitating a bespoke e-commerce module.

## The Solution

Our team took the provided PSD and meticulously crafted a DNN theme, ensuring multiple inner page skins for a versatile and cohesive look throughout the website. We then developed the website within the DNN framework, constructing all necessary pages and integrating the provided content. To meet the complex donation requirements, we built a bespoke e-commerce module in DNN. This module allowed for multi-currency donations and integrated various payment gateways, ensuring seamless transactions for donors worldwide.

## The Outcome

The client was extremely pleased with the final website, expressing delight at the high-quality DNN skinning and development services we provided. The bespoke e-commerce module effectively facilitated donations in multiple currencies through different payment gateways, enhancing their fundraising capabilities. They were particularly happy to find a UK-based agency capable of delivering such precise and professional work. The new website not only met their expectations but also significantly improved their online presence and donation process, reflecting their brand effectively and engaging their audience seamlessly.
